##### **Supervised By**

**Mr. Vaibhav Diwan**

**(Technical Trainer)**

**About the Project:**

In this project we are going to create web application based on bus transportation system. Web application will provide user with facilities regarding buses availability, their route and much more.

**Motivation:**

On the basis of reviews received from students we aim to build an informative, organized and interactive website on bus transportation system.

**Future prospects:**

In future the web application can be extended to provide the users the exact location of far the bus is from their stoppage. The static route map can be converted into dynamic one.

**Intended Outcome:**

A web application on bus transportation system.

**Hardware Requirements:**

- Personal Computer

**Software Requirements:**

- Google Chrome
- Text Editor
- Xampp server
